

High temperatures

As we are experiencing unusually high external temperatures, we would like to remind you that we have guidance on [temperature at work](#) on the University's website.

Temperature in indoor workplaces: Gives guidance on management and personal controls and information on what to do if there is an ongoing problem with temperature control.

Working in the Sun: Gives guidance on managing risks from the sun and hot, humid conditions. A link to the IOSH *No Time to Lose* campaign on solar radiation has also been included. It gives access to free resources to assist with raising awareness of the risks, including posters, pocket cards, leaflets and toolbox talks.
